

Rohit Jain

Bengaluru, India · +91 9008302605 · rohitjn26@gmail.com · linkedin.com/in/rohitjn

Enterprise AI, Data & Platform Leader with 16 years of experience architecting and scaling enterprise data platforms, AI-enabled data products and analytics services. Hands-on builder of **production agentic AI capabilities using MCP, multi-agent orchestration, semantic layers and API-driven data services**, with experience taking AI solutions from architecture and development through production deployment, optimization and monitoring. Proven track record of leading globally distributed teams and delivering scalable platforms with measurable improvements in adoption, performance, reliability and cost.

PROFESSIONAL EXPERIENCE

Senior Manager, BI Engineering — Medable Inc. | Bengaluru, India | Feb 2022 – Aug 2026

SaaS platform for decentralized clinical trials. Sole data leader in India, accountable for the data platform end-to-end, with a skip-level reporting line to the co-founder/CTO.

- **AI, Data Platform & Architecture Leadership.** Owned Medable's data platform end-to-end, partnering with executive leadership and product management to architect scalable data and AI capabilities; built and led a globally distributed team of data engineers, backend/frontend engineers and analysts across four time zones.
- **Enterprise Data Foundation & Self-Service.** Designed and delivered Medable's first internal data warehouse; drove self-service adoption to 60% of employees.
 - **Streaming data ingestion.** Built MongoDB change streams → Pub/Sub → BigQuery pipelines using Avro and a schema registry, keeping downstream datasets contract compliant as source documents evolved.
 - **Data transformation & consumption.** Built Airflow-orchestrated transformations into reusable models and Looker views, with automated lag, throughput and anomaly checks.
- **Clinical data platform transformation.** Architected and twice re-platformed the production platform as clinical studies grew **5x in two years**, evolving from legacy cursor-based reporting to federated queries and ultimately streaming CDC.
 - **Architecture evolution.** Replaced cursor-based reporting with Trino federated queries directly against MongoDB through custom Thrift connectors, then moved off federation once it stopped scaling with study volume.
 - **Streaming data architecture.** Implemented Debezium change data capture from MongoDB into RisingWave for streaming transformation and StarRocks for serving, with a custom single-message transformation normalizing BSON in flight.
 - **Data model & deployment.** Modelled the serving layer in SQLMesh with generated changelog tables, blue-green table swaps on StarRocks, and daily partitioning under a fixed retention window.
 - **Platform reliability & operational excellence.** Maintained a 30-second report-load SLA and sub-60-second data freshness through automated data-quality checks, observability, alerting and production monitoring with Soda, Prometheus and Grafana.
 - **Platform cost optimization.** Analyzed platform consumption and cross-region data-movement costs across EU and US streaming workloads; optimized background processing and GCS state-write frequency to reduce unnecessary data movement and lower platform costs by ~20%.
- **Agentic AI & Intelligent Reporting Platform.** Built an LLM-powered production agentic AI platform with **two enterprise customers**, reducing average report-authoring time from 10 days to 3 days.
 - **Configuration-driven reporting.** JSON configs define Chart.js chart properties together with the dimensions and measures each chart requires, resolved at render time through an MCP over the Analytics API.
 - **Self-Extending Semantic Layer.** A sub-agent authors and updates dimension and measure definitions for reuse in a production definition store via a dedicated MCP, so the semantic layer extends itself rather than failing on undefined metrics.
 - **AI-ready data onboarding.** Generalized MCP for onboarding new data sources — declare an ontology and bindings, with DuckDB mounted to the MCP to ingest and analyze a subset of the source data.
- **Data Products & Governed Data Access.** Architected and personally developed production data APIs used by multiple pharmaceutical sponsors, enabling governed programmatic access to clinical data.
 - **CDC Streaming API.** Built a FastAPI service exposing CDC streams over HTTP/JSON with JWT authentication, per-study authorization and cursor-based pagination; delivered from specification to production in 14 days.
 - **Governed semantic layer.** Built the Analytics API on Cube.dev, providing a governed semantic layer for consistent metric definitions and data consumption across customers and internal users.

Senior Manager, Product Analytics — Walmart Global Tech | Bengaluru, India | Jan 2019 – Feb 2022

Led product analytics for the ecommerce and in-store product organisations. Promoted to Senior Manager, December 2020.

- **Analytics Organization & Leadership.** Scaled the team **from 3 to 25 analysts** across multiple analytics verticals.
 - **Team scaling.** Hired 14 analysts within the first four months to meet demand.
 - **Organization expansion.** Expanded the charter from e-commerce analytics to apps and in-store product analytics.
- **Product Experimentation & Decision Science.** Owned A/B testing across the full ecommerce funnel — desktop web, mobile web, and apps.
 - **Experimentation.** Established the first cohort of app-side experiments as mobile revenue accelerated.
 - **Product health.** Built product health monitoring, alerting, and impact-sizing used by product leadership to prioritise fixes.
- **Executive & Cross-functional Partnership.** Partnered daily with US-based product and engineering leadership across time zones.

DGM, Data & Analytics — Aditya Birla Fashion Retail | Bengaluru, India | Dec 2015 – Jan 2019

Ecommerce business. First analytics hire; reporting directly to the CTO.

- **Analytics & Data Platform.** Established the analytics function from zero, including team, tooling and roadmap.
 - **Enterprise data foundation.** Built a unified warehouse combining clickstream and transactional data, giving Marketing, Merchandising, and Finance a single source for customer analysis.
 - **Self-service analytics.** Delivered self-service reporting to business users via SSAS tabular models.
- **Predictive Analytics.** Developed a return-to-origin prediction model that **reduced the cash-on-delivery return rate by 25%.**
 - Objective was to predict the RTO probability before the order hits the warehouse.
 - Post probability determination, Customer Support would nudge a fraction of orders to re-verify the intent.
- **Recommendation & NLP.** Developed a proof-of-concept next-best-product recommendation algorithm based on customer's behavioral data using NLP techniques.
 - Clickstream data for the user was decomposed into product attributes and was considered as a document using doc2vec.
 - Current catalog was then ranked as per the similarity to the attribute preference vector per customer per category

Associate Manager, Trust Analytics — eBay India | Bengaluru, India | Dec 2014 – Dec 2015

- **Optimization & Decision Analytics.** Optimized losses under the Buyer Guarantee Programme as part of a global team, running threshold simulations to balance incident losses against customer service cost — **delivering approximately \$4.5M in annual savings.**

Senior Analyst, FMCG Division — Fractal Analytics | Mumbai, India | Jul 2011 – Dec 2014

- **Pricing & Promotion Analytics.** Delivered pricing and promotion solutions for global FMCG clients, including price tiering, KVI segmentation, and an R implementation using smoothing splines to identify optimal price indices.
- **Process Excellence.** Led a Lean Six Sigma implementation on a retained engagement that **reduced turnaround time by 25%**, and coordinated dashboard delivery across North America, EMEA, and APAC.

Earlier: Analyst, Quantitative Research & Analytics — Grail Research, Noida (2010–2011)

TECHNICAL EXPERTISE

AI Architecture & Agentic AI: Agentic AI, Multi-agent Orchestration, MCP, RAG, Schema-guided Generation, Semantic Layers, Ontology & Binding Design

Enterprise Data & Architecture: Data Platform Architecture, Data Products, Federated Data Access, Data Contracts, Schema Governance, Data Quality, Observability

Data & AI Platforms: BigQuery, Trino, Pub/Sub, StarRocks, RisingWave, Debezium/CDC, SQLMesh, DuckDB, MongoDB, Spark/Databricks, Airflow, Apache Iceberg, Cube.dev

Engineering & DevOps: Python, FastAPI, Docker, Kubernetes, Helm, Git, GitLab CI/CD, pytest

Analytics & Machine Learning: SQL, Python, R, A/B Testing & Experimentation, Looker/LookML, Tableau, Power BI, NLP, Regression, Random Forest, XGBoost

EDUCATION & PROFESSIONAL DEVELOPMENT

B.Tech — Indian Institute of Technology (IIT) Delhi (2005-09)

Certifications: Lean Six Sigma Green Belt (SSA Solutions); TIBCO Spotfire Author (SP100KA); Looker and LookML, Introduction to Airflow (Udemy); Intro to Deep Learning (Kaggle); Statistical Inference and R Programming (Coursera).

Career track mentor, Springboard (2020–2022) — guided eight professionals into data analytics roles.
